3. Title analysis

Patterns are observational and not proof that a style causes better results. Thumbnail click-through rate is not available from public data.

Feature	Group	Videos	Median Views	Median Relative	Note
Title pattern	Comparison	5	17,095	2.75	
Title pattern	How-to / guide	11	5,052	0.81	
Title pattern	Number / list	4	2,492	0.40

Title length	<30 chars	24	5,452	0.88	
Contains a number	False	36	6,747	1.08	
Contains a number	True	4	2,492	0.40	
Is a question	False	29	6,603	1.06	
Is a question	True	11	5,852	0.94	
Keyword in first 40 chars	True	40	6,228	1.00	
Has brackets	False	40	6,228	1.00	

4. Topic breakdown

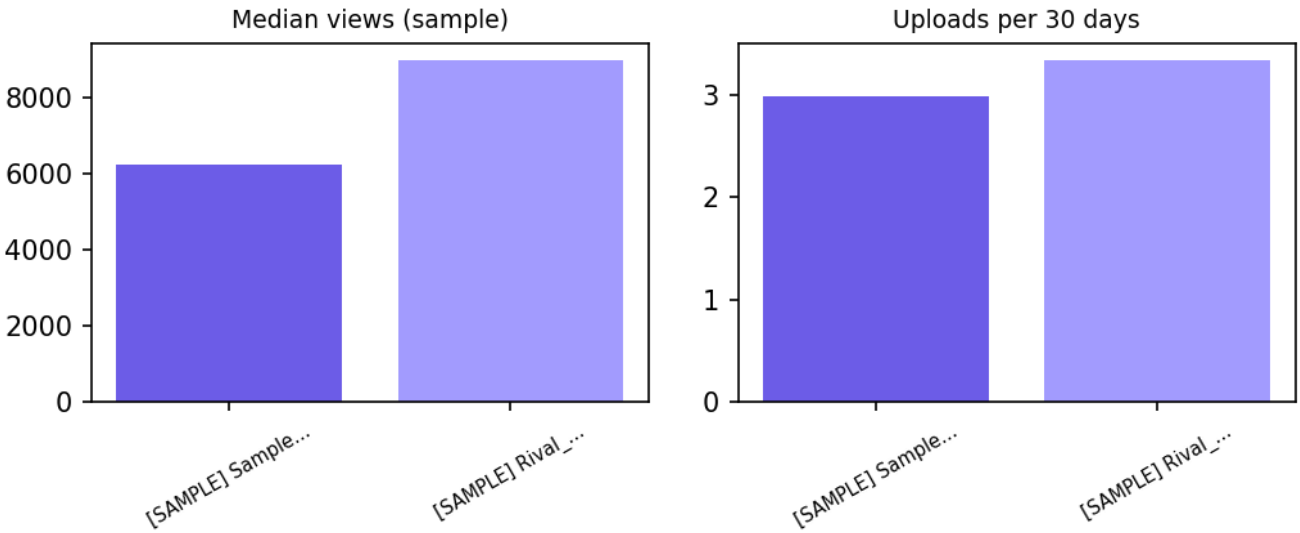

Topic method: automatic keyword clustering. Based on metadata (titles, tags, descriptions), not full video content.

Topic	Videos	Share	Median Views	Median Relative	Observation
Home	13	0.33	6,933	1.11	Typical performance
Coffee Grinder	11	0.28	4,385	0.70	Weaker observed performance
Espresso	9	0.23	15,733	2.53	Strong observed performance
Pour	7	0.17	4,648	0.75	Inconsistent performance

5. Competitor comparison (auto-discovered)

Competitors were found automatically from channels publishing recent videos on your topics; this is a heuristic, not a ranking of true rivals.

6. Content gap recommendations

Priority = 30% relevance + 30% demand evidence + 20% differentiation + 20% feasibility. A content gap is not proof of search demand. Suggested titles are recommendations, not guaranteed improvements.

1. All figures come from public YouTube Data API v3 fields. Watch time, impressions, click-through rate, audience retention, traffic sources and revenue are NOT available unless a channel owner authorises YouTube Analytics access (not used here).

2. Lifetime channel statistics (whole channel) are reported separately from statistics of the selected video sample/date range.

3. Views are cumulative, so older videos have had longer to accumulate; a low-view video is not automatically a failure.

4. Topic groups come from titles, tags and the start of descriptions (no transcripts); they are approximate.

5. A content gap is not proof of search demand; no search-volume data was used.

6. AI-generated titles and plans (if enabled) are recommendations, not guaranteed improvements. Nothing here predicts views, subscribers, virality or ranking.

7. Compared channels differ in age, audience size, niche, upload history and content mix; raw views alone do not show which is 'better'.

8. Views per 1,000 subscribers is a rough size-adjusted indicator; subscriber counts may be hidden or rounded by YouTube.

9. Only public data from the selected sample of recent uploads is used. Private analytics (watch time, CTR, retention, revenue) are not available.

10. Topics are inferred from titles/tags/descriptions, so they are approximate.
